An Appropriate Technique of Facilitation Using Students' Participation Level Measurement & its PIR. Experiences*

1. Introduction

1.1 Background

Enrollment management is an important aspect of the university system. It is a challenging task due to the characteristics of the student population, which includes both local and international students. The system needs to be efficient and effective in managing the student enrolment process. A technique that can facilitate the participation of the students in the enrolment process is needed. This study aimed to examine the impact of a participatory approach on the student enrolment process. The study used a mixed-method approach, combining qualitative and quantitative data analysis.

1.2 Objectives

The objective of this study was to examine the impact of a participatory approach on the student enrolment process. Specifically, the study aimed to:

- Examine the effectiveness of the participatory approach on the student enrolment process.
- Identify the challenges faced by the students in the enrolment process.
- Recommend strategies to improve the student enrolment process.
